

Burak Üren

Backend Developer (Python / Django)

Istanbul, Turkey | contact@burakuren.com | +90 (532) 727 3873
burakuren.com | github.com/burakuren | linkedin.com/in/burakuren

SUMMARY

Backend developer with 3+ years of professional experience building scalable REST APIs, microservices, and payment-integrated systems with Django and Flask in Agile/Scrum teams. Founded and operated a production marketplace platform serving 4,500+ users end to end, from API design to infrastructure.

TECHNICAL SKILLS

Languages	Python, SQL
Frameworks	Django, Django REST Framework, Flask, SQLAlchemy, Alembic, Celery, HTMX
Data	PostgreSQL (incl. Full-Text Search), Redis, pandas (DataFrames over SQL, CSV and Excel sources)
Messaging	RabbitMQ
Cloud & Infra	AWS (RDS, S3, EKS, ElastiCache), DigitalOcean, Docker, Docker Compose, Kubernetes, Caddy, Nginx
CI/CD & Quality	GitHub Actions, Jenkins, Git, pytest, factory-boy, black, flake8, isort, mypy, Grafana, Loki, Swagger/OpenAPI, Linux
Concepts	REST API design, microservices, caching, performance optimization, RBAC, JWT/OAuth, Stripe payments
Practices	Agile/Scrum, test-driven development, code review, CI/CD, OpenAPI documentation
Spoken Languages	Turkish (native), English (professional working proficiency)

EXPERIENCE

MatFabe Referral Web Application

Mar 2026 – Present

Backend Developer

- Building a referral platform for a private tutoring service (Django, PostgreSQL), live in production with about 100 users.
- Modeled a multi-level referrer invitation network and an ordered outreach pipeline enforcing valid stage transitions.
- Implemented django-allauth authentication with Google sign-in and a feature-flagged admin-approval mode; work test-first in Scrum iterations, with a pytest and factory-boy suite guarding every release.
- Containerized with Docker; CI/CD via GitHub Actions publishing versioned images to DigitalOcean Container Registry.

SMGrader.com

Oct 2022 – Nov 2025

Backend Developer

- Developed the REST API of an AI-powered grading platform with Django REST Framework, plus asynchronous microservices built on Celery, RabbitMQ, and Redis.
- Built organization-level RBAC on Django's permission framework; integrated Stripe with per-user token budget logic.
- Created a background job system with monitoring, task tracking, and log-based debugging; added graceful cancellation via a Redis flag workers check before starting, diverting cancelled jobs.
- Cut database load by caching metadata shared across background tasks in Redis, read-through with TTL expiry.
- Loaded SQL query results, CSV and Excel datasets into pandas DataFrames and ran transformation and aggregation steps over them for reporting and data handover.
- Built a message-level logging solution with alerting, contributing to its Grafana, Loki, and Slack integrations; developed a bidirectional data synchronization integration between Canvas LMS and the platform.
- Built services on AWS (RDS, S3, EKS, ElastiCache); deployed through established Jenkins pipelines.
- Assisted the DevOps team on Kubernetes scaling work; delivered in Scrum sprints with peer code review.

BanaDersBul.com

Jan 2021 – Present

Founder, Backend Developer (self-employed, part-time since Oct 2022)

- Launched a teacher-student marketplace for private lessons, grown to 4,500+ users; own backend and infrastructure.
- Built the backend as a REST API with Flask, SQLAlchemy (Alembic migrations) and PostgreSQL, incl. Full-Text Search.
- Cached search results in Redis keyed by a hash of the query, cutting repeated database round-trips under concurrent traffic.
- Implemented JWT authentication (logins, secure file downloads, password resets, admin impersonation) and a Flask-Admin panel.
- Migrated from a DigitalOcean Kubernetes cluster to a hardened server, cutting cost; one-click GitHub Actions deploys.

EDUCATION

Istanbul Kultur University

Sep 2022 – Jun 2026

B.Sc. Mathematics and Computer Science; mentored student coders ("Patika.dev"), ran Linux community events; Erasmus+ BIP on metacognition in education with EU partner universities (2026)
